

Dataset 1: PJM Hourly Load Dataset

Each row in the PJM Hourly Load dataset represents a single metered electricity load observation for a specific load area within the PJM Interconnection grid. Each observation corresponds to one hour of electricity demand recorded at one load area at a specific point in time.

Column Name	Description	Example Values
datetime_beginning_utc	Timestamp of the electricity demand observation in Coordinated Universal Time	2025-01-01T00:00:00Z
datetime_beginning_ept	Timestamp of the electricity demand observation in Eastern Standard Time	2025-01-01T00:00:00-05:00
nerc_region	North American Electric Reliability Corporation region for the observation	ERCOT
mkt_region	PJM market region for the observation	MIDATL, WEST
zone	Transmission zone identifier	DOM, AEP, RTO
load_area	Specific load area within the zone	DOM, AECO, RECO
mw	Metered electricity demand for the load area measured in megawatts	1246.598, 870.261
is_verified	Indicator of whether the observation has been verified by the data provider	True, False

Dataset 2: NOAA Daily Weather Summary Dataset

Each row in the NOAA Daily Weather Summary dataset represents a single day of weather observations recorded at one weather station in the Charlottesville, Virginia area. Each observation corresponds to one station-date pair, including daily precipitation totals and temperature extremes.

Column Name	Description	Example Values
STATION	Unique identifier for the weather station	USW00003759, USC00443213
NAME	Name and location of the weather station	CHARLOTTESVILLE 2 SSE, VA US
DATE	Date of the weather observation	2025-01-01
PRCP	Total precipitation recorded for the day in inches	0.00, 0.21, 0.63
TMIN	Minimum temperature recorded for the day in degrees Fahrenheit	22.0, 33.0
TMAX	Maximum temperature recorded for the day in degrees Fahrenheit	35.0, 50.0
